

PITTSBURGH PIPE

SINCE 1977

Protect Infrastructure With Proven Pipe Coatings

Pittsburgh Pipe proudly provides durable coatings that defend against corrosion, chemicals, and time.

Reliable Coating Protection Available From Pittsburgh Pipe

When your steel pipe needs dependable performance in the harshest environments, turn to Pittsburgh Pipe's trusted bituminous and coal tar coating solutions. Whether you're working on underground utilities, marine infrastructure, or submerged systems, our coatings protect your investment and extend service life, delivered on time and backed by expert service.

Bituminous Lacquer

A budget-friendly barrier against corrosion and wear, our bituminous lacquer delivers a flexible, protective layer that enhances underground pipe longevity.

Coal Tar Coating

Ideal for high-stress environments, coal tar resists water, soil, and chemical exposure. It's trusted in applications where long-term durability is non-negotiable.

Coal Tar Epoxy

This high-performance coating combines the chemical strength of epoxy with the resilience of coal tar. Perfect for marine, sewer, or submerged infrastructure, it's engineered to protect pipe when failure isn't an option.

Building Stronger Connections

Pittsburgh Pipe is an affiliate member of:

- ✔ American Welding Society
- ✔ International Association of Foundation Drilling
- ✔ Power and Communication Contractors Association
- ✔ Deep Foundations Institute
- ✔ National Association of Steel Pipe Distributors
- ✔ National Utility Contractors Association

Coat Your Next Project the Right Way
